

Press release

Scheer bundles technological competence in a single software house

Merging of technology, process, AI and integration competencies in Scheer PAS Deutschland GmbH

Saarbrücken, 30.02.2020

Effective April 1, 2020, Scheer Holding is bundling the technology, process, artificial intelligence, and integration competencies of various holdings of the Scheer Group in a single software company, Scheer PAS Deutschland GmbH, located in Saarbrücken.

Scheer PAS Deutschland GmbH has a clear product profile and is focused on the market-oriented further development and international marketing of its eponymous proprietary Scheer PAS technology platform.

Scheer PAS is a technology platform (PaaS), which represents a complete solution for companies in the digitization process. It is also the only product in the market that comprehensively and integratively covers the core functions of automation, integration, and application development. Through the integration of low code and AI technologies, it enables fast, innovative problem solutions that classic business software cannot always deliver due to its monolithic basic architecture. This gives organizations greater independence and enables them to develop and deploy differentiating business applications as required.

Wolfram Jost, CPO: "The new company is effective, flexible and geared for short innovation cycles. Our low-code platform allows us to offer companies future-proof technology that enables them to react flexibly to new business challenges at any time. Bundling all core competencies in a single software company enables fast growth and agile development. At the same time, the close relationship with Scheer GmbH ensures comprehensive and process-based consultation for our customers."

About Scheer PAS Deutschland GmbH

Scheer PAS Deutschland GmbH is an innovative software company that provides digitization support to companies and organizations by helping them to implement necessary changes in their processes and applications as simply and quickly as possible.

At Scheer PAS, we connect people, processes and systems organically – and the existing infrastructure of our customers serves as the central basis. Through agile automation of critical business processes on the basis of digital applications and their integration into existing infrastructure, the low code platform ensures fast reaction to current challenges and it enables end-to-end digitization of all processes.

Scheer PAS combines flexibility and reaction speed, and thus ensures that companies remain effective in times of uncertain future requirements. As the only provider of a digital transformation platform, which comprehensively maps the core topics of process integration, IT automation, and application development in a single solution, we combine a tested philosophy – Model2Execute – with a flexible and powerful software technology.

In a strong alliance with the other companies of the Scheer Group, we enable change. Fast, simple, secure.
